

1

*The user presents their access badge
To the card reader...*

2

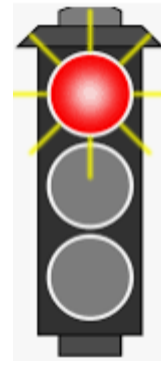

*The card reader waits for 5 seconds
allowing the camera to scan the person...*

3

*If their temperature is normal then
the card reader LED changes
to green...*

4

and the door is released

1

*The user presents their access badge
To the card reader...*

2

*The card reader waits for 5 seconds
allowing the camera to scan the person...*

3

*The camera detects a temperature
abnormality and blocks the door.*

4

*An alarm is generated and images
are recorded on the camera's SD card.*
